

1)mkdir -p /root/log_output

2)vi /usr/local/bin/log_capture

3)#!/bin/bash

ls -l /tmp > /root/log_output/system_logs.trc

chmod +x /usr/local/bin/log_capture

4) systemctl service yaratmaq

vi /etc/systemd/system/log_capture.service

[Unit]

Description=Capture /tmp file list

[Service]

Type=oneshot

ExecStart=/usr/local/bin/log_capture

5) systemctl timer yaratmaq

vi /etc/systemd/system/log_capture.timer

[Unit]

Description=Run log_capture.service every 1 minute

[Timer]

OnUnitActiveSec=1min

Unit=log_capture.service

[Install]

WantedBy=timers.target

6) systemctl daemon-reload

systemctl enable --now log_capture.timer

systemctl status log_capture.timer

systemctl list-timers

systemd-də timerlər hər zaman birbaşa scripti işə sala BİLMİR.

Timer yalnız **service** işə sala bilər.

Ona görə ayrıca log_capture.service yaradılmalıdır
