

Advanced Linux course syllabus

010 333 23 24

idtech.edu.az

idtech_academy

Təlimçi: Rövşən İbrahimov

Senior Linux System Engineer

Təcrübə:

- Softgile - Senior Linux System Engineer
- MilliKart MMC - Senior Linux System Administrator
- Bank of Baku ASC - Lead Linux Sistem Administrator
- Aztelekom MMC - Linux Sistem Administrator

Fəaliyyətlər:

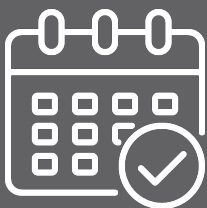

- Ingress Academy - Linux müəllimi
- İKT LAB Tətbiq və Tədris Mərkəzi - Linux müəllimi

Sertifikatlar: RHCSA

Atlassian Jira Certificate

Device42 Technical Certificate

Kursun formatı:

**19 dər
Həftədə 2 dəfə**

**Hər dər 2 saat davam
edir**

**Hər dərsdən sonra
şagirdlərə ev tapşırığı
verilir**

Tədris Məqsədləri və Kursun Proqramı

DƏRS 1

DNS and Its Functionality

- DNS Components and Terminology
- DNS Resolution Process
- DNS Record Types
- DNS Management and Troubleshooting

DƏRS 2

PowerDNS Server

- Installing PowerDNS
- Configuring Local Files
- Creating Forward Zone Files
- Configuring Secondary DNS Servers
- Master-Slave Server Replication

DƏRS 3

PostgreSQL

- Installing PostgreSQL
- SQL Database Structure
- CRUD Operations
- Granting Privileges
- Database Backup and Recovery

DƏRS 4

Tomcat Application Server

- Introduction to Tomcat
- Single vs. Multi-Instance Setup
- Tomcat Directory Structure
- Deploying Applications
- Writing Scripts to Start, Stop, and Restart Instances

DƏRS 5

Certificate Authority (CA) Server

- Introduction to Certificate Authorities (CAs)
- Public Key Infrastructure (PKI) Concepts
- Types of Digital Certificates
- Components of a CA
- SSL/TLS Handshake Process

DƏRS 6

Advanced Certificate Authority Setup

- Setting Up OpenSSL Environment
- Generating Key Pairs and Digital Certificates
- Creating Certificate Signing Requests (CSRs)
- Building a Simple CA Hierarchy

DƏRS 7

Apache HTTP Server

- Apache vs Nginx
- Installation and Setup
- Apache Architecture and Components
- Virtual Hosts, Logging, and Monitoring

DƏRS 8

Nginx

- Introduction and Setup
- Server Blocks and Virtual Hosts
- SSL/TLS Configuration
- Load Balancing

DƏRS 9

HAProxy

- Installation and Configuration
- Logging, Error Handling, and Backend Servers
- Advanced Load Balancing Techniques
- Health Checks and Monitoring

DƏRS 10

Troubleshooting and Monitoring

- Linux Performance Monitoring
- File System and Network Monitoring Tools

DƏRS 11-12

Uyuni

- Configuring Network Settings and Repositories
- User and Role Management
- Registering Linux Clients with Uyuni
- Managing Software Channels and Repositories

DƏRS 13-14

Monitoring with Zabbix

- Introduction to Zabbix
- Installing and Configuring Zabbix with PostgreSQL
- Monitoring Hosts, Agents, and Templates
- Zabbix Discovery Rules, Triggers, and Notifications

DƏRS 15

Atlassian Tools Overview

- Bitbucket, Git, Jira, Confluence Overview
- Hands-on Practice with Atlassian Cloud

DƏRS 16-17

Jira Data Center Cluster

- Node Configuration, Shared File System Setup
- HTTP Load Balancer Configuration
- Session Management with Sticky Sessions

DƏRS 18-19

Git and GitLab

- Git Overview
- Introduction to GitLab and Version Control Practices
